DETAILED ACTION

Election/Restrictions

1. Claims 9-30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 10.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Igashira et al. (US 4728074).

Igashira et al. discloses a piezoelectric device for an injector, built into an injector and generating driving force of said injector (10), characterized in that: said piezoelectric device is fabricated by alternately laminating a plurality of piezoelectric layers (100) generating displacement in proportion to an applied voltage (Column 5, lines 8-25) and a plurality of internal electrode layers (Column 4, lines 58-69) for supplying the applied voltage.

However, it fails to disclose a relation $d(0.1E_c)/d(1.2E_c) > 0.43$; said piezoelectric device having a change ratio of displacement of 9% or below when a frequency of the applied voltage is changed from 1 Hz to 200 Hz; wherein the displacement increases with the rise of temperature within the range of -400°C to 1500°C; and having a dielectric loss of 8% or below.

Art Unit: 2834

4. With regards to claims 1 and 2, the limitation "a relation $d(0.1E_c)/d(1.2E_c) > 0.43$, where E_c is the coercive electric field" and with regards to claims 3-8, the limitation phrases: "said piezoelectric device having a change ratio of displacement of 9% or below when a frequency of the applied voltage is changed from 1 Hz to 200 Hz"; "wherein the displacement increases with the rise of temperature within the range of -400°C to 1500°C"; and "having a dielectric loss of 8% or below" do not show a structural feature in the claimed invention. It is not supported by claim structure, they are only goals of the invention. The court has stated that "where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation", *In re Aller*, 105 USPQ 233.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
